Submitted (FEB-1996) to the EWBL/GenBank/DDBJ databases.
Submitted (FEB-1996) to represent a widespread endoprotease activity
Inthin the constitutive and regulated secretory pathway. Capable
of Cleavage at the EX(K/R)R consensus motif.

CATALYTIC ACTIVITY: Release of mature proteins from their
proproteins by cleavage of Arg-Xaa-Yaa-ARG-|-Zaa bonds, where Xaa
can be any amino acid and Yaa is Arg or Lys.

SUBCELLULAR LOCATION: Secreted (By similarity).

ALTERNATIVE PRODUCTS:

-I- FUNCTION: Binds to WNT proteins and inhibits their activities. May be involved in mesoderm segmentation.

-I- SUBCELLULAR LOCATION: Scretched.

-I- TISSUB SPECIFICITY: During somatogenesis, expressed predominantly in unsegmented paraxial presomitic mesoderm and, to a much lesser extent, in newly segmented somites.

-I- DEVELOPMENTAL STAGE: First expressed at neurula stages.

-I- SIMILARITY: Contains 1 WIF domains.
                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

"Ectopic neural expression of a floor plate marker in frog embryos injected with the midline transcription factor Pintallavis.", Proc. Natl. Acad. Sci. U.S.A. 90:8268-8272(1993).
-!- FUNCTION: Promotes the attachment of spinal cord and sensory neuron cells and the outgrowth of neurites in vitro. May contribute to the growth and guidance of axons in both the spinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cord and the PNS.
--- SUBCELLUAR LOCATION: Secreted.
--- TISSUB SPRCIPICITY: Expressed at high levels in the floor plate.
--- SIMILARITY: Contains 6 TSP type-1 domains.
                                                                                                                                                                                                                                                                                                                        Xenopus laevis (African clawed frog).

not heart.
--- DBVELOPMENTAL STAGE: Expressed in the embryonic ventricular zone, the postnatal ependymal cells, and the choroid plexus throughout embryonic and postnatal development.
--- PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proceolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(TM) and a N-terminal fragment N(TM) and a notemediate fragment (TACE) to yield a membrane associated intermediate fragment called notch extracellular truncation (NEXT). This fragment is then cleaved by presentlin dependent gamma-secretase to release a notch-derived peptide containing the intracellular domain (NICD) from the membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. SUBUNIT: TETRAMER OF 2 ALPHA AND 2 BETA CHAINS LINKED BY DISULFIDE BONDS. THE ALPHA CHAINS CONTRIBUTE TO THE FORMATION OF THE LIGAND-BINDING DOMAIN, WHILE THE BETA CHAIN CARRIES THE KINASE DOMAIN. SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Belongs to the Tyr family of protein kinases. Insulin

                                                        CHAIN
     TALLINGS.

-1. DEVELOPMENTAL STACE: Expressed in the brain during B14 and B17.

-1. DEVELOPMENTAL STACE: Expressed in the brain during B14 and B17.

-1. PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proteolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma embrane to yield an active, ligand-accessible form. Cleavage results in a Cterminal fragment N(TM) and a N-terminal fragment N(RC). Following ligand binding, it is cleaved by TNF-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called notch extracellular truncation (NEXT). This fragment is then cleaved by presentil in dependent gamma-secretase to release a cleaved by presentil in dependent gamma-secretase to release a containing the intracellular domain (NICD) from the membrane (By similarity).

-1. SIMILARITY: Contains 3 bgP-like domains.

-1. SIMILARITY: Contains 2 Lin/Notch repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.                                                                                                             bonds (By similarity).

SUBCELLUIAR LOCATION: Type I membrane protein. Following
proteolytical processing NICD is translocated to the nucleus.
TISSUE SPECIFICITY: Highly expressed in the spleen and choroid
plexus in the brain. Expressed in postnatal central nervous system
(CNS) germinal zones and, in early postnatal life, within numerous
cells throughout the CNS. It is more highly localized to
ventricular germinal zones. Also found in the heart, liver and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NEUROGENIC LOCUS NOTCH HOMOLOG PROTEIN 2.
  development, probably in some aspect of cell specification and/or differentiation (By similarity). SUBDNIT: Heterodimer of a C-terminal fragment N(TM) and a N-terminal fragment N(EC) which are probably linked by disulfide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Receptor, Transcription, Transcription, Activator; Differentiation, Developmental protein, Repeat, ANK repeat, EGF-like domain, Transmembrane, Glycoprotein; Signal; Phosphorylation.

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, encoded the proliferation or survival of a stem cell, encoded the proliferation or survival of a stem cell, encoded the proposition of a stem cell, pluripotent cell, hasmatopoietic progenitor cell, pluripotent cell, hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell, pluripotent cell or totipotent cell. The hasmatopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as agraft for the bone marrow cramplantation or cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, hasman, hasmania, daucher, sidesease, lysosomal storage cuch as sickle cell anaemia due to enzyme defect, congenital anaemia cuch as sickle cell anaemia, daucher, adisease, lysosomal storage diseases such as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiency syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequences of the invention are also useful in gene therapy. The present sequence is stem cell growth factor-like protein from mouse
                                                                                                                                               Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzhelmer's
                                                                                                                                                                                                                 disease, cancer, rheumatoid arthritis, osteoporosis

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding CG SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide, an (expression) vector comprising the SCR-1 polymucleotide, a host cell genetically engineered to contain the SCR-1 polymucleotide in operative association with a regulatory sequence that controls expression of the polymucleotide in the host cell, or expression product of the SCR-1 polymucleotide (the polypeptide having an expression product of the SCR-1 polymucleotide (the polypeptide having an equivity to support proliferation or survival of haematopoietic stem cell, with a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABO44433), an isolated sorn and conservity and isolated sorn propertive ass from ABO44430, an isolated polypeptide

I lacking any 10 consecutive ass from ABO44430, an isolated polypeptide Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells. Claim 23; Page 80; 96pp; English.

with stem cell growth factor activity having at least an as sequence appearing as ABO44428 and ABO4429, a culture medium comprising the SCR-1 polypeptide to maintain survival of or promote proliferation of a stem cell or germ cell, an anti-SCR 1 antibody, a nucleic acid array comprising the SCR-1 polymucleotide or a unique segment of the SCR-1 polymucleotide, a stromal cell genetically

```
engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cell genetically engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell. The SCR-1 polypeptide and for maintaining survival of or promoting proliferation of a stem cell, a germ cell, a demanicabiling survival of or promoting proliferation of a stem cell. The SCR-1 polypeptide is useful for promoting proliferation of a stem cell. The SCR-1 polypeptide is useful for promoting wound castem cell. The SCR-1 polypeptide is useful for promoting wound castem cell. The SCR-1 polypeptide is useful for promoting wound castem cell. The SCR-1 polypeptide is useful for promoting wound caste for the conventional bone marrow transplantation or cord blood graft for the conventional bone marrow transplantation or cord blood caste for the conventional bone marrow transplantation or cord blood diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia, due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's disease etc. the SCR-1 polypeptide is useful for cell growth and regulation, ovarian follicle development, promoting nerve cell growth, austaining neuronal populations, cartilage remodeling, bone propersia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 LPPVLERIGMKOIGVCLSSCPSGYYGTRYPDINKCTKCKVDCDYCPNKNPCTKCKSGFYL 120

```
The present sequence is the protein sequence for human thrombospondin-30. Thrombospondin-30 protein and coding sequence are useful in the diagnosis and treatment of malignant tumour. haemopathy, HIV infection, immunological diseases and various inflammation diseases. In addition thrombospondin-30 protein may be used for screening mimics, agonists, antagonists or inhibitors, or for use in peptide fingerprinting identification. The thrombospondin-30 coding sequence may be used as primers for nucleic acid amplification reaction or as probes for hybridisation reaction, or in producing gene chips or microarrays

Human stem cell growth factor-like protein #4

```
encoded polypeptides (AAM7832) AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, activity, tissue growth factor activity, hamminomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, in the diagnosis and/or infammation. Note: Records for SBO ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 LPPVLERIGMEGIGYCLSSCPSGYYGTRYPDINKCTKCKVDCDTCPNKNPCTKCKSGPYL 120

The patent discloses novel stem cell growth factor-like proteins and polynucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, germ cell, germ cell, embryonic stem cell, paematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth factor-like proteins can replace as a graft for the bone marrow transplantation or cord blood transplantation for treating a variety of diseases such as munuodeficiency syndrome, chonic granulomatous diseases, duplicated immunodeficiency syndrome, chonic as sickle cell anaemia Gaucher's disease, lysosomal storage such as sickle cell anaemia Gaucher's disease, lysosomal storage cellseases such as mucopolysactoral white matter degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases such as parkhnon's diseases. Alzheimer's entered are useful for treating diseases such as Parkhnon's diseases.
                                Human; stem cell growth factor-like protein; antiinflammatory; nootropic; neuroprotective; vulnerary; cytostatic; anticonvulsant; immunostimulant; vasotropic; virucide; dermatological; tranquilliser; cerebroprotective; osteopathic; immunodeficiency syndrome; chronic granulomatous disease; duplicated immunodeficiency syndrome; wiskott-Aldrich syndrome; AIDS; acquired immunodeficiency syndrome; agammaglobulinaemia; thalassaemia; dancher's disease; lysosomal storage disease; mucopolysaccharidosis; adrenal white matter degeneration; anaemia; neurodegenerative disease; Parkinson's disease; Alzheimer's disease; thrombocytopaenia; SCID; severe combined immunodeficiency; immune disorder; autoimmune disorder; autoimmune disorder; autoimmune pulmonary inflammation; cancer; tumour; gene therapy; SCR-1; supporting factor for the proliferation of stem cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immundeficiency (SCID) and autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, germ cell, germ cell, embryonic stem cell, propentior cell, embryonic stem cell, propentior cell, manatopoietic progenitor cell, pluripotent cell or totipotent cell. The hacematopoietic progenitor cell, pluripotent cell or totipotent cell. The hacematopoietic progenitor cell, pluripotent cell or totipotent cell. The hacematopoietic progenitor cell, pluripotent cell or totipotent cell, cell, manatopoietic progenitor or cord blood transplantation for treating a variety of diseases uch as immunodeficiency syndrome, chronic granulomatous disease, duplicated immunodeficiency syndrome, chronic granulomatous (Miskott-Aldrich syndrome, acquired immune deficiency syndrome (AIDS), thalassaemia, hacemolytic anaemia due to enzyme defect, congenital anaemia cuch as sickhe cell anaemia Gaucher's disease, lyposomal storage diseases such as mucopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tunnours. Proteins of the invention cer useful for treating diseases uch as Parkinson's disease, Alzhaimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiency (SCID)) and autoimmune disorders such as multiple sclerosis, systemic lupus arythematosus, rheumatoid arthritis, and autoimmune plumonary chlumamation. Sequences of the invention are also useful in gene therapy.

The present sequence is stem cell growth factor-like protein from human

                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to new stem cell growth factor-like polypeptides and polynucleotides. The stem cell growth factor-like polypeptides and polynucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. cause the stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerative diseases like Alzheimer's can disease. They are also useful for generating me tisuues and organs that may aid patients in need of transplanted tissues. The polynucleotides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in generating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed genes, and for inducing immune response. The polypeptides are useful for generating antibodies that specifically bind the polypeptides are useful for generating antibodies that specifically bind the polypeptide source). Compositions comprising the current cor prevention of cancers, and other immunological disorders. The current cor prevention of cancers, and other immunological disorders. The current cor prevention of cancers, and other immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HIGKCLDSCPEGLBANNHTWECVSIVHCBASEWSPWSPCMKKCKTCGFKRGTETRVRDIL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1; immunostimulant; vulnerary; haematopoietic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; haematopoietic progenitor cell; stromal cell; AIDS; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; agammaglobulineamia; Hiskott-Aldrich syndrome; haemolytic anamia; congenital anaemia; dicklaemia; daucher's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or its mature protein portion, or ragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ပ

CC SCR-1 polymucleotide, a host cell genetically engineered to comprising the SCR-1 polymucleotide, a host cell genetically engineered to comprising the SCR-1 polymucleotide in operative association with a regulatory sequence that controls expression of the polymucleotide in the host cell, the polymucleotide in the host cell, corporation of the polymucleotide in the host cell, corporation of the polymucleotide in the host cell, corporation of survival of haematopoietic stem cell activity to support proliferation or survival of haematopoietic stem cell comprise the as sequence appearing as ABO44433), an sequence does not comprise the as sequence appearing as ABO44433, an isolated SCR-1 polypeptide with stem cell growth factor activity and leaching any 10 consecutive ass from ABO44430, an isolated polypeptide (with stem cell growth factor activity having at least an as sequence appearing as ABO44432 and ABO44433, a nucleic acid array cell or germ cell, an anti-SCR_1 antibody, an uncleic acid array comprising the SCR-1 polymucleotide or a unique segment of the SCR-1 polymptide to maintain survival of or promote proliferation or survival of a stem cell or germ cell and an implant comprising a cell polymucleotide or express the SCR-1 polymptide to support proliferation or survival of a stem cell or germ cell and an implant comprising a cell comprision or survival of a stem cell or germ cell and an implant comprising wound the propertide and for maintening survival of or promoting wound chaing. The buman haematopoietic stem cell or promoting wound chaing. The buman haematopoietic stem cell or hamatopoietic comprised to a stem cell, a germ cell, a permention of haematopoietic stem cell or the composition or cord blood transplantation. The buman haematopoietic stem cell or human cell composition or transplantation or transplantation or transplantation or hearty for treating diseases such as chronic granicated immunodeficiency syndrome, assumaglobulinaemia, due to enzyme defect, compenition or such propertide is useful 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             morphogenesis, including tissue specific stem cell growth, epithelial cell growth and regulation, ovarian follicle development, promoting nerve cell growth, sustaining neuronal populations, cartilage remodeling, bone growth and immunosuppression. The present sequence is a Human SCR-1
complement of the polynucleotide), an (expression) vector comprising the

Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor cells.

Claim 23; Fig 3; 96pp; English.

Gaps 7; The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1) from mouse or human, or tem mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polynucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polynucleotide), an (expression) vector comprising the SCR-1 polymcleotide, a host cell genetically engineered to contain the SCR-1 polymcleotide in the host cell, that controls expression of the polymcleotide in the host cell, preparation of the SCR-1 polymcleotide in the host cell, preparation of the SCR-1 polymcleotide (the polypeptide having an activity to support proliferation or survival of haematopoietic stem cell or haematopoietic progenitor cell, with a proviso that C-terminal as sequence does not comprise the as sequence appearing as ABO44431, an isolated SCR-1 polypeptide with stem cell growth factor activity and lacking any 10 consecutive and from ABO44430, an isolated polypeptide appearing as ABO44428 and ABO44429, a culture medium comprising the SCR-1 cell or germ cell, an anti-SCR 1 antibody, an uncleic acid artary. celfor germ cell, an anti-SCR I antibody, a nucleic acid array comprising the SCR-1 polynucleotide or a unique segment of the SCR-1 polynucleotide attached to a surface, a stronal cell genetically engineered to express the SCR-1 polypeptide to support proliferation of survival of a stem cell or germ cell and an implant comprising a cell genetically engineered to express the SCR-1 polypeptide to support WO200177169-A2

```
proliferation or survival of a stem cell or germ cell. The SCR-1

polypeptide is useful for identifying a compound that binds to the SCR-1

colypeptide and for maintaining survival of or promoting proliferation of

a stem cell, a germ cell, a haematopoietic stem cell or a haematopoietic

progenitor cell. The SCR-1 polypeptide is useful for promoting wound

consenior cell. The SCR-1 polypeptide is useful for promoting wound

consenior cell culture using the SCR-1 polypeptide can replace as a

graft for the conventional bone marrow transplantation or cord blood

cransplantation. The transplantation of haematopoietic stem cells can be

cransplantation. The transplantation of haematopoietic stem cells can be

cransplantation. The transplantation or sord blood

cransplantation. The transplantation or cord blood

cransplantation. The transplantation or cord blood

diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia,

diseases, duplicated immunodeficiency syndrome, agammaglobulinaemia,

due to enzyme defect, congenital anaemia such as sicklaemia, Gaucher's

disease etc. the SCR-1 polypeptide is useful for cell growth and

cransplantation, ovarian follicle development, promoting nerve

cell growth and regulation, ovarian follicle development, promoting nerve

cell growth, austaining neuronal populations, cartilage remodeling, bone

proved.

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, grem cell, grem cell, growth factor-like proteins are useful for supporting proliferation or cell, grem line stem cell, embryonic stem cell, paematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell cultured using stem cell growth catorial seases such as immunodeficiency syndrome, chronic granulomatous confiseases udplicated immunodeficiency syndrome, chronic granulomatous wiskott-Aldrich syndrome, acquired immune deficiency syndrome, lulbS), thalassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia cultassaemia, haemolytic anaemia due to enzyme defect, congenital anaemia cells as sickle cell anaemia due to enzyme defect, congenital anaemia desensation, a variety of cancer and tumours. Proteins of the invention cere useful for treating diseases such as Parkinson's disease, harbeimer's clisease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID) and autoimmune disorders such as multiple selezois, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequence is stem cell growth factor-like protein from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  63 PPALERICAKQIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNFCTKCKSGFYLH 122

The invention relates to an isolated stem cell growth factor-like polypeptide (referred as supporting factor for proliferation of stem cells (SCR-1)) from mouse or human, or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity. Also included are an isolated polymucleotide encoding SCR-1 (or its mature protein portion, or fragment, analogue, variant or derivative, that retains stem cell growth factor activity, or the complement of the polymucleotide, an (expression) vector comprising the SCR-1 polymucleotide, an operative association with a regulatory sequence or strain polymucleotide in operative association with a regulatory sequence that controls expression of the polymucleotide in the host cell, that controls expression of the SCR-1 polymucleotide in the host cell, caprassion product of the SCR-1 polymucleotide (the polypeptide having an activity to support proliferation or survival of haematopoietic stem cell or heamatopoietic stem cell or heamatopoieti
                                                                                                                                                                                                                                                                                                                                                                                                                                 immunostimulant; vulnerary; hematopoletic stem cell; gene therapy; supporting factor for proliferation of stem cells; wound healing; supporting factor for proliferation of stem cells; wound healing; hematopoletic progenitor cell; stromal cell; hibs; thalassaemia; bone marrow transplantation; cord blood transplantation; chronic granulomatous disease; duplicated immunodeficiency syndrome; agammaglobulinaemia; Miskott-Aldrich syndrome; haemolytic anaemia; congenital anaemia; sicklaemia; Gaucher's disease; morphogenesis; epithelial cell growth; ovarian follicle development; nerve cell growth; cartilage remodeling; bone growth; immunosuppression; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated polypeptide having stem cell growth factor activity, useful for promoting wound healing, and as a medicine to proliferate or support human hematopoietic stem cells or human hematopoietic progenitor
                                                                                                                                                                                                                                                                                                                                                                                                                Stem cell growth factor-like protein; antianemic; anti-HIV; SCR-1;

cc isolated SCR-1 polypeptide with stem cell growth factor activity and lacking any 10 consecutive aas from ABO4430, an isolated polypeptide with stem cell growth factor activity having at least an as sequence appearing as ABO44428 and ABO44430, a culture medium comprising the SCR-1 polypeptide to maintain survival of or promote proliferation of a stem cell, an anti-SCR lantibody, a mucleic acid array comprising the SCR-1 polymuclecided or a unique segment of the SCR-1 polymuclecided extached to a surface, a stromal cell genetically comprising the SCR-1 polymuclecided or a unique segment of the SCR-1 polymuclecided at a stem cell or germ cell and an implant comprising a cell contributed or survival of a stem cell and an implant comprising a cell contributed by engineered to express the SCR-1 polypeptide to support proliferation or survival of a stem cell or germ cell. The SCR-1 polypeptide is useful for promoting proliferation or survival of a stem cell or germ cell. The SCR-1 polypeptide is useful for promoting wound a stem cell, a germ cell, a hemantopoietic stem cell or a haematopoietic stem cell or a haematopoietic stem cell or promoting wound correspondent or cell culture using the SCR-1 polypeptide can replace as a graft for the conventional bone marrow transplantation or cord blood cransplantation. The transplantation of haematopoietic stem cells can be employed as a therapy for treating diseases such as chornic granulomatous diseases, duplicated immunodeficiency syndrome, agammaglobulinemia, cumphogenesis, including tissue specific stem cell growth, and regulation, ovarian follicle development, promoting nor properior cell growth and immunosuppression. The present sequence is a Human SCR-1 polypeptide is useful for cell growth and immunosuppression. The present sequence is a Human SCR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63 PFALERICANKOIGVCLSSCPSGYYGTRYPDINKCTKCKADCDTCFNKNFCTKCKSGFYLH 122

The patent discloses novel stem cell growth factor-like proteins and polymucleotides encoding them. Proteins of the invention are also known as supporting factor for the proliferation of stem cells (SCR-1). Stem cell growth factor-like proteins are useful for supporting proliferation or survival of a stem cell, embryonic stem cell, paramatopoietic stem cell, embryonic stem cell, paramatopoietic stem cell, embryonic stem cell, paramatopoietic stem cell. pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic progenitor cell, pluripotent cell or totipotent cell. The haematopoietic stem replace as a grafe for the bone marrow cell. The proteins can replace as a grafe for the bone marrow or factor-like proteins can replace as a grafe for the bone marrow cord blood transplantation for treating a variety of diseases such as immunodeficiency syndrome, chronic granulomatous disease, duplicated immunodeficiency syndrome, chronic granulomatous conflicts and immunodeficiency syndrome, plusplantation as sickle cell anaemia due to enzyme defect, congenital anaemia cuch as micopolysaccharidosis, adrenal white matter degeneration, a variety of cancer and tumours. Proteins of the invention are useful for treating diseases uch as Parkinson's disease, harbeimer's disease and other neurodegenerative diseases, thrombocytopaenia, immune deficiencies and disorders such as severe combined immunodeficiency (SCID) and autoimmune disorders such as multiple solerois, systemic lupus erythematosus, rheumatoid arthritis, and autoimmune pulmonary inflammation. Sequence of the invention are also useful in gene therapy. The present sequence is human SCR-1 related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MHLRLISCEPIILNPMEYIGSQNASRGRRQRRMHPNVSQCQGGCATCSDYNGCLSCKPR 60
osteogathic; immunodeficiency syndrome; chronic granulomatous disease; duplicated immunodeficiency syndrome; Wiskott.Aldrich syndrome; AIDS; acquired immune deficiency syndrome; wiskott.Aldrich syndrome; AIDS; daucher's disease; lysosomal storage disease; mucopolysaccharidosis; adrenal white matter degeneration; anaemia, neurodegenerative disease; Parkinson's disease; thrombocycopaemia; SCID; severe conbined immunodeficiency; immune disorder; autorimmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthritis; supporting factor for the proliferation of stem cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel stem cell growth factor like polypeptides and polynucleotides for identifying modulators useful for treating diseases such as Alzheimer's disease, cancer, rheumatoid arthritis, osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6; Gaps

cocker mammalian proteins (II) where the procesn is abusernially treating or ameliorating a medical condition, especially immunological treating or ameliorating a medical condition, especially immunological treatment or prevention of tumours: (I) eshibite activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity and activin or inhibin-related cytokine, cell proliferation, cell differentiation or inhibin-related cells frow be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or genetic disorders. (I) induces the proliferation of neural cells and central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease and commoniation of hematopoiesis and is useful for treating myeloid cell disorders, platelet disorders such as thrombocytopaenia and for regemeration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders or cegeneration and treatment of lung or liver fibroals, reperfusion injury in various tissues, various immune deficiencies and disorders including cevere combined immunodeficiency (SCID), bacterial or fungal lifections, autoimmune disorders e.g. multiple spreaded and in gene therapy. The present cecombinant protein, as markers for tissues in which the corresponding protein is preferentially expressed and in gene therapy. The present

The invention relates to new stem cell growth factor-like polypeptides and polynucleotides. The stem cell growth factor-like polypeptides and polynucleotides are useful for inducing differentiation of embryonic and adult stem cells to give rise to different cell types, for treating e.g. leukaemia, haemophilia and degenerative diseases like Alzheimer's consease. They are also useful for generating new tissues and organs that can apply and patients in need of transplanted tissues. The polymclectides are useful as hybridisation probes, oligomers or primers for PCR, for chromosome and gene mapping, in recombinantly producing protein, in generating antisense DNA or RNA, in diagnostics as expressed sequence tags for identifying expressed genes, and for inducing immune response. The polypeptides are useful for generating antibodies that specifically bind the polypeptides are useful for generating antibodies that specifically bind the polypeptides as molecular weight markers, and as a food supplement (e.g. protein or amino acid supplement, and as a carbon, nitrogen or carbohydrate source). Compositions comprising the current polypeptides or polynucleotides are useful for the diagnosis, treatment or prevention of cancers, and other immunological disorders. The current sequence represents a human secreted protein clone da_288_6
                                                                                                                                                                                                                                                                                                                                                  New stem cell growth factor-like polypeptides and polymucleotides, useful for treating e.g. leukemia, hemophilia and degenerative diseases like Alzheimer's disease, and for inducing immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 LPPVLERIGMKQIGVCLSSCPSGYYGTRYPDINKCTKCKVDCDTCPNKNPCTKCKSGPYL 120

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 10,
